THE purpose of this little catalogue is simply to give plain descriptions of the dahlias of which we have bulbs to offer; it is mailed to all of last year's customers and will be gladly sent to any address upon request.

Many of our orders are received on account of recommendations of our customers, and we consider the users of our bulbs as our best advertisements. Thanks for your generous patronage in the past and for your kind words and friendly criticisms. Remember that it is our purpose to serve you right each year.

Each year we try out many different dahlias, and in this manner we are able to make a selection that is superior to most seed houses that do not grow their own dahlias. The sale of cut flowers is a part of our business and it would not be a good business policy to grow dahlias that were not free bloomers and strong, robust growers. Before placing your order you should consider this point. We believe that there is no firm that is as critical in the selection of dahlias as Barkley & Moore.

Should you, at any time, have any criticism to make, you would do us a favor if you would tell us, as we wish to please all of our customers. Any information that we can give will be given gladly.

On orders amounting to \$10.00, you may select stock to the value of \$1.00 free, and select 10 cents additional value for every \$1.00 over \$10.00. At prices named all orders amounting to \$1.00 or more will be sent prepaid; less than that add 5 cents for postage. We feel sure that our prices are as low as the best quality of dahlias can be sold and that no one can supply the equal to ours for less money. We do not send out the extra large bulbs nor the real small ones, but send those of a medium size, strong and vigorous, sure to sprout and grow, the kind that gives satisfaction; no broken necks nor shriveled up bulbs. Remember that you can compare prices but not quality. Prices quoted are for divided, field grown roots having one or more eyes subject to the goods being sold.

Remittances should be made by post office money order, draft, registered letter or express money order.

Our Guarantee

We guarantee that all orders will reach you in good condition.

We take every precaution to have all stock genuine and true to name and description. We can not however give any warranty (expressed or implied) as to results and can not be responsible beyond that of replacing stock not true to name or refunding the price paid at the time of purchase. Having no control over them after delivery, we do not guarantee them to live and thrive. But we do rely upon the intelligence of our patrons in realizing with us that we or no other person can control the life of a bulb or the results therefrom.

Any unsatisfactory bulbs must be returned within ten days from date of shipment, with the original label attached.

DAHLIAS

The dahlia is called: "The Queen of the Autumn Flowers", a title which they justly deserve. Probably no flower has been more improved upon than the dahlia since its introduction to the flower growers. Each year we find it growing in favor with the public. The Europeans have long recognized the dahlia as one of the very best flowers, both for decorative and cut flower purposes. America is now growing them more than ever before.

The dahlia can be used in many different ways; the landscape gardener finds it valuable because of its many different forms and colors; the amateur finds pleasure in growing the dahlia either when grown in the garden or in scattered groups about its borders, while the up-to-date florist finds it invaluable in making up floral designs or in sprays.

It furnishes a wider color range than any other flower; brighter in some instances than the rose, vying with it in delicacy of texture, exceeding it in the number and striking effect of color combinations; because of its similarity it is often mistaken for Chrysanthemums, Cosmos, Poinsettias, Clematis, Aster, Zinnia, Peonies and Cinneraria. The present day dahlia is such an improvement over the old and familiar varieties that it is hard for many visitors to our gardens to realize that they are all dahlias.

Cultivation

The dahlia is one of the easiest flowers to grow and in this climate produces flowers from late July until killing frost, provided they receive proper care and attention. They will do well in any drained garden soil, but should have an open sunny situation. The soil should be thoroughly prepared by spading twelve to eighteen inches deep. Plant any time between April the twentieth and June the first. Dig holes six inches deep, then lay the tuber flat on its side; do not stand the tuber up. The plants should stand two or three feet apart and when planted in rows, the rows should be at least four feet apart. As soon as the plants show above the ground they should be hoed, keeping the soil thoroughly stirred and free from weeds until the plants begin to bud, at which time all cultivation should stop, and, if possible, give the beds a mulch of straw or leaves; the clippings from the lawn is a very good mulch. Many growers advocate the watering of the dahlia, but we never water ours and have the first time to have a failure but will say if you wish to water them, be sure that you do it thoroughly, for light sprinkling will do them more harm than good. Each plant should be staked, in order that it may have strong support. When staking, be careful not to place the stake too close to the plant, as it will injure the root.

When they begin to bloom, never allow the faded flowers to remain on the plant, but cut them off with as much stem or stalk as you can. As a rule the more they are cut the better bloom you will have. Should there be more than one bud on a stem, pinch all but one, which makes the flowers larger and better. After the frost kills the tops in the late fall the tops should be cut off and the roots dug and stored in a frost proof cellar or basement, covering with dry soil or any thing that will keep them from shriveling. In the spring, after the eyes begin to show, is the time when they should be divided for planting.

Classes Of Dahlias

Dahlias are divided into a number of classes, some of which are the Decorative, Cactus, Peony, Show, Century and Pompon.

The Decorative dahlias have flowers that are open wide and flat, full to the center, petals overlapping. Some of largest flowers are found in this class and are used extensively for cut flowers. This class is considered by many to be the best type of all dahlias.

Cactus, this type is quite different from any of the others, having long narrow pointed, tubular and twisted petals. Flowers resemble the chrysanthemum.

Peony, flowers resemble the semi-double Japanese peonies, the flowers showing a yellow center and semi-double, petals sometimes curved and twisted. Flowers of this type are unusually large and graceful.

Show, this is the oldest type, petals are quilled. The modern show dahlias however are still grown for cut flowers and are among the most beautiful of all dahlias.

Century or Single, has but one row of petals, with large open center. Pompon are the same as the show, except in size, being much smaller.

Order Early, Lest You Forget

Gladioli

The Gladioli are very easy to grow. The bulbs can be planted as soon as the soil can be worked in the spring (with us about the 15th of April), and to have a succession of blooms they should be planted at different times, about two weeks apart. Spade the ground deep and pulverize thoroughly, and plant the bulbs from four to six inches deep, and five to six inches apart in the rows. The rows should be a foot apart. Give them a good sunny location and plenty of moisture after they show above the ground. Keep the soil loose and free from weeds. In cutting the blooms leave four or more leaves so as not to injure the bulb. Cut the bloom when the first bud is open, the rest of the buds will open when placed in water.
